

# Tools for publication and analysis of TEI documents

TEI@Oxford

July 2009

# Summary

- Now that it's all in TEI XML, what next?
- Varieties of XML delivery system
- Some real life examples

## A reminder: what is XML for?

- exchanging data
  1. between people
  2. between people and machines
  3. between machines
- preserving information
  1. independent of particular applications
  2. independent of medium or hardware

But is XML any good as a means of **delivering** information?

## What tools do we need?

- Appropriately expressive vocabularies (eg TEI XML)
- Syntax-checking document creation tools (ie editors)
- Document transformation tools
- Document delivery tools
- Document storage and management tools
- Programming interfaces
- Specialized applications

## What are the options?

- for delivery:
  - transform into HTML on the server and deliver that
  - deliver XML; use clever client-side processing to handle it
- for management:
  - the filesystem
  - a content management system
  - a database management system
- for tools development:
  - generic digital library solutions e.g. xtf
  - Linux-Apache-mySQL-PHP (LAMP) toolkit
  - web applications using xhtml, ajax, etc.

## Real life examples 1

The line of least resistance...

- Here are some TEI files. You know what to do.  
<http://www.cnrtl.fr/corpus/estrepublikain/>
- Just the data... <http://archimedespalimpsest.net>
- make the browser do the work: Early America's Digital Archive  
(<http://www.mith2.umd.edu/eada/>)
- handling multiple scripts: Samyukta Agama  
(<http://buddhistinformatics.ddbc.edu.tw/BZA/>)
- HAL Open Archive (<http://hal.archives-ouvertes.fr>)

## Real life examples 2

- make the client do the work: Artamène, ou Le Grand Cyrus (<http://www.artamene.org/>)
- combine image and text: Robert Graves' Diary (<http://www.tapor.uvic.ca:8080/cocoon/graves/index.xml>)
- critical edition of biblical literature: ([http://www.sbl-site.org/publications/books\\_additionalmaterial.aspx](http://www.sbl-site.org/publications/books_additionalmaterial.aspx))
- Old Bailey proceedings <http://www.oldbaileyonline.org>
- digital archive: Swinburne Archive (<http://swinburnearchive.indiana.edu/swinburne/www/swinburne/>)
- Ms cataloguing (<http://handrit.is>)
- <http://www.bvh.univ-tours.fr/Epistemon/index.htm>

## XTF meets Mr Punch

- Extensible Text Framework or XTF (<http://www.cdlib.org/inside/projects/xtf/>) is a collection of server-side scripts from the California Digital Library
- If you are already running Apache and Tomcat, and have access to a website, you can set up a default xtf application for TEI files in 5 minutes
- (more or less)
- Library model

[http://m.ox.ac.uk:  
8080/xtf/view?docId=Punch/1914-07-01.xml](http://m.ox.ac.uk:8080/xtf/view?docId=Punch/1914-07-01.xml)

## Conclusions

- even the simplest of approaches allows you to share your encoding, your analysis
- the more ambitious your markup, the more sophisticated the possibilities
- there is a common set of techniques and tools: you don't need to re-invent the wheel
- TEI XML empowers the data provider: you determine what can be done with your materials
